IRONLEDGER · DESIGN TOKENS · V2.0

"The financial chaos *ends here.*"

Evolved token system — warmer, more vibrant, still trust-anchored. Three new accent axes. Full motion token set. Revised type scale. Drop-in CSS custom properties for Radix + Tailwind.

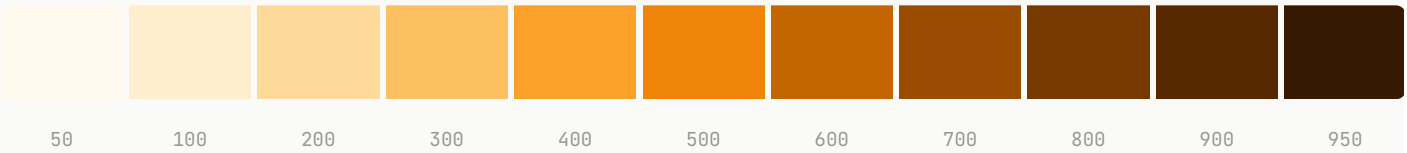
- Amber — Primary/CTA
- Emerald — Reward/Success
- Violet — Agentic/Alive
- Teal — Utility (legacy)
- April 26, 2026

01 Color Scales

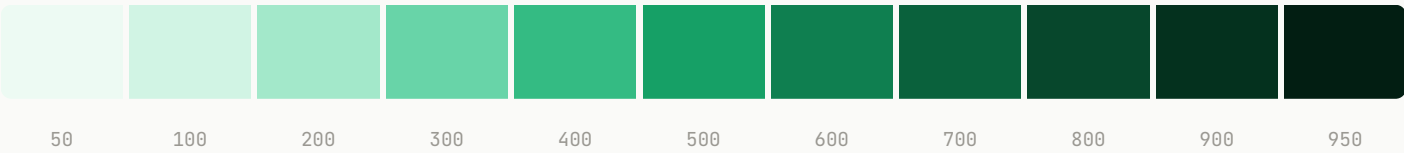
Three new accent axes + revised warm neutral. All oklch-sourced for perceptual uniformity. Hover swatches for hex values.

NEUTRAL Warm Stone — canvas, surface, borders, text `oklch(L 0.01 60)`

AMBER Hero CTAs, primary actions, focus rings — warm brass, not warning `oklch(L 0.17 54)`



EMERALD Reward moments, success states, anomaly-free results — premium, not neon `oklch(L 0.16 152)`



VIOLET Agentic indicators, processing pulses, data flow — alive, not alarming `oklch(L 0.16 282)`

50 100 200 300 400 500 600 700 800 900 950

TEAL Legacy utility — secondary links, data table accents, inline highlights only `demoted from primary accent`

> *All three new accents share chroma ≈ 0.17 and are spaced 76° apart on the hue wheel (54°→152°→282°). This means any two can coexist on the same screen without visual tension — they read as a family, not a collision.*

02 Semantic Token Map

Use these in components, never raw scale tokens. Scale = what; semantic = why.

TOKEN	VALUE → SCALE	ROLE	USE FOR
SURFACE			
`--canvas`	#FAFAF8 → neutral-50	App background	*body bg, empty states*
`--surface`	#FFFFFF	Card, sheet, panel	*cards, sidebars, dropdowns*
`--border`	#E9E8E4 → neutral-200	Default separator	*table borders, dividers*
`--border-strong`	#D5D3CE → neutral-300	Emphasized border	*active rows, focused inputs*
TEXT			
`--text-primary`	#252421 → neutral-900	Body text, labels	*headings, form labels, data*
`--text-secondary`	#787670 → neutral-600	Supporting text	*descriptions, timestamps*
`--text-tertiary`	#9A9892 → neutral-500	Deemphasized	*placeholders, helper text*
`--text-disabled`	#BAB8B2 → neutral-400	Disabled UI	*disabled inputs, muted items*

	neutral-400		
ACCENT			
--accent-primary	#F08408 → amber-500	Hero CTA, primary action	*primary btn bg, progress bars*
--accent-primary-dark	#C46600 → amber-600	Hover/pressed state	*btn hover, active indicator*
--accent-primary-bg	#FFF8ED → amber-50	Tinted bg	*selected row bg, highlight*
--accent-reward	#16A066 → emerald-500	Reward / success	*confirm btn, success toast*
--accent-reward-bg	#EDFAF3 → emerald-50	Reward background	*clean-run banner, zero-anomaly card*
--accent-agent	#6651D4 → violet-500	Agentic / processing	*pulse dot, data-flow bar, agent chip*
--accent-agent-bg	#F3F1FD → violet-50	Agent context bg	*agent status bar bg*
--accent-utility	#0D9488 → teal-600	Legacy utility	*secondary links, data table accents*

03 Severity States

Medium severity now uses amber-family for brand cohesion. Favorable promoted to vibrant emerald.

• HIGH

Duplicate vendor detected. $24,800 flagged across 3 invoices.

--severity-high-bg: #FEF0F0
--severity-high-text: #B91C1C
--severity-high-border: #FECACA

◐ MEDIUM

Approval workflow delay. 3 items pending >48h review.

--severity-medium-bg: amber-50
--severity-medium-text: amber-700
--severity-medium-border: amber-200

○ NORMAL

Monthly close in progress. 14 of 18 checks complete.

--severity-normal-bg: neutral-100
--severity-normal-text: neutral-600
--severity-normal-border: neutral-200

✓ FAVORABLE

Zero anomalies this period. Reconciliation complete.

--severity-favorable-bg: emerald-50
--severity-favorable-text: emerald-700
--severity-favorable-border: emerald-200

HIGH MEDIUM NORMAL FAVORABLE

Badge size tokens: 10px / weight 600 / letter-spacing 0.04em / uppercase

04 Motion Tokens

CSS-only. Restrained but intentional — each curve chosen for the interaction type, not decoration.

DURATIONS

TOKEN	VALUE	USE FOR
--duration-instant	80ms	Icon swaps, toggle indicators, instant feedback
--duration-fast	140ms	Button hover/press, chip highlights, row hover
--duration-base	220ms	Card lift, panel open, dropdown reveal, tab switch
--duration-slow	380ms	Page transitions, modal enter/exit, drawer slide
--duration-reward	650ms	Success confirm, zero-anomaly reveal, confetti beat

EASING CURVES — HOVER THE TRACK TO PREVIEW

--ease-out
cubic-bezier(0.16, 1, 0.3, 1)
Default for hover, reveal, expand. Snappy entry.

--ease-in-out
cubic-bezier(0.45, 0, 0.55, 1)
Page transitions, drawer slides. Deliberate, balanced.

--ease-spring
cubic-bezier(0.34, 1.56, 0.64, 1)
Reward moments only. Slight overshoot. Do not overuse.

--ease-linear
linear
Progress bars, data flow animations, loaders.

SCALE VALUES

TOKEN	VALUE	USE FOR
--scale-hover	1.015	Button, card, interactive element hover
--scale-press	0.970	Button active/pressed
--scale-reward	1.040	Success pulse — use once, not on hover

ACCENT SHADOWS

TOKEN	EFFECT
--shadow-amber	Primary btn hover glow
--shadow-emerald	Reward state glow
--shadow-violet	Agent focus context

LIVE INTERACTION DEMOS

Primary CTA hover + press

scale(1.015) on hover → scale(0.970) on active. Amber glow shadow fires on hover.

`duration-fast 140ms` `ease-out` `scale-hover 1.015` `scale-press 0.97` `shadow-amber`

Card / section lift

translateY(-2px) + shadow-md on hover. Base duration for deliberate intent feel.

`duration-base 220ms` `ease-out` `translateY(-2px)` `shadow-md`

Reward / success moment

Spring-eased scale pulse (1→1.04→0.99→1) + white flash overlay. Click to trigger.

`duration-reward 650ms` `ease-spring` `scale-reward 1.04` `shadow-emerald`

Agentic / processing pulse

Concentric ring expansion, 1.8s loop. Data flow bar uses ease-linear for continuous feel.

`duration-base loop 1.8s` `ease-out (rings)` `ease-linear (bar)` `accent-agent violet-500`

> *Motion reduction: wrap all transition/animation declarations in `@media (prefers-reduced-motion: no-preference)`. Provide instant fallbacks at `--duration-instant: 0ms` for the reduced-motion context.*

05 Typography Scale

Inter for UI, Source Serif 4 for financial display numbers, JetBrains Mono for data/code. Existing stack, sharper hierarchy.

Clean Books

INV-2024-003821 · $12,450.00 · ACC-4499-B

> ***Key change from v1:*** *Source Serif 4 promoted to display/hero-number role. This creates a deliberate contrast between data (mono), UI (Inter), and financial significance (serif) — a visual signal that "this number matters." Use it sparingly: KPI metrics, confirmation totals, zero-state headlines.*

09

Changelog from v1

What changed, what stayed, what was retired.

NEW — AMBER SCALE

Added full 50–950 amber scale as the new primary action color. Replaces teal as the hero CTA color. Semantic tokens: `--accent-primary`, `--accent-primary-dark`, `--accent-primary-bg`, `--accent-primary-text`.

NEW — EMERALD SCALE

New 50–950 emerald scale for reward moments and success states. Warmer and more saturated than the previous `#166534`-family. Used for `--severity-favorable` and confirm/close actions.

NEW — VIOLET SCALE

New 50–950 violet scale exclusively for agentic and processing UI states. Pulse animations, data flow bars, processing indicators. Semantic tokens: `--accent-agent` family.

REVISED — NEUTRAL SCALE

Canvas/surface base unchanged (`#FAFAF8` ≈ original). Mid-range tones slightly warmer (+hue 60 vs 0). Border tokens now use `--neutral-200` and `--neutral-300` for clear hierarchy.

REVISED — SEVERITY / MEDIUM

Medium severity migrated from old `#FEF3C7` / `#B45309` to amber-family tokens for brand cohesion. High severity background lightened slightly to `#FEF0F0` (less aggressive). Favorable now uses emerald instead of old `#ECFDF5` / `#166534`.

DEMOTED — TEAL

Teal (`#0D9488`) retired from primary accent role. Kept as `--accent-utility` for secondary links, data table header text, inline highlights. Not for buttons or primary UI chrome.

NEW — MOTION TOKEN SET

5 duration tokens (80–650ms), 4 easing curves, 3 scale values, 3 accent shadows, and `@media (prefers-reduced-motion)` safety layer. Zero Framer Motion dependency — pure CSS custom properties.

REVISED — TYPOGRAPHY

Source Serif 4 promoted to display/hero-number role (was underused). Inter weight scale

tightened: 700 for H1, 600 for H2–H3, 500 for labels/UI. JetBrains Mono now specified for all data cells with `font-variant-numeric: tabular-nums`.
